

EDWARD BARTON

Software Engineer

hello@not-ed.com | linkedin.com/in/not-ed | github.com/not-ed | not-ed.com

PROFILE

I am a UK-based Software Engineer with 3 years of Backend experience delivering and maintaining server-side logic for PaaS/SaaS solutions and customer-facing APIs in the retail, e-Commerce, and financial sector. I bring proven professional experience working in cross-disciplinary Agile, Scrum, and XP-driven teams using SOLID and TDD principles, which is augmented with a broader knowledge and interest in other areas of Tech as a field, as informed by my projects, mentoring and public speaking efforts.

EDUCATION

Staffordshire University / University of Staffordshire BSc (Hons) Computer Science /w Placement Year First-class Honors	Sep. 2021 - Jul. 2024 Stoke-on-Trent, Staffordshire
Staffordshire University / University of Staffordshire BSc (Hons) Computer Games Programming Incomplete (course transfer)	Sep. 2020 - Jun. 2021 Stoke-on-Trent, Staffordshire
Guildford College BTEC Level 3 Extended Diploma: Creative Media Production Distinction Merit Merit	Sep. 2015 - Jul. 2017 Guildford, Surrey

EXPERIENCE

Software Engineer II Codeweavers Ltd	Jun. 2025 - Present Stafford, Staffordshire
- Currently working in Backend on a Scrum-based, cross-disciplinary team building a new unannounced PaaS/SaaS product for a key financial services enterprise in the UK. - Collaborated closely with Product Owners, Design and Frontend teams to own the full SDLC of modelling, designing and delivering brand new APIs in adherence with SOLID and TDD principles, using a C#, ASP.NET, NUnit, Moq and PostgreSQL stack. - Partnered with Developers and external Stakeholders to orchestrate the transition to a bespoke vehicle lookup integration for a key client, enhancing data accuracy and reducing annual OpEx by £108k.	
Software Engineer I	Jun. 2024 - Jun. 2025
- Worked in Backend as part of Codeweavers' Digital Store Team, a cross-discipline, XP-driven team who oversee a fleet of modular, self-serve PaaS/SaaS solutions and public-facing APIs that assist buyers and retailers in the global automotive sales and financing sector. - Implemented and maintained APIs and Distributed Services consumed by external clients and internal teams using a C#, ASP.NET, NUnit, Moq, and PostgreSQL stack in conjunction with SOLID and TDD principles. - Participated in team-wide planning meetings to clarify and prioritise stories in upcoming work and ensured continued platform integrity by removing technical debt and assisting in the triage of client-raised defects and platform-wide outages. - Assisted internal "Academy" team in training 3 T-level students over 4 weeks, including direct technical mentorship and delivery of 7 out of 9 scoped back-of-house features requested by Support teams.	
Placement Backend Developer Codeweavers Ltd	Jul. 2022 - Sep. 2023 Stafford, Staffordshire
- Worked across numerous teams implementing and maintaining server-side logic for several Automotive Financing and Commerce-based Products and APIs using C#, .NET, NUnit, Moq and PostgreSQL/SQL Server with NHibernate, while working under Agile, TDD and Mob Programming methodologies. - Assisted in migrating 28,000+ live Stock Location records from SQL Server to PostgreSQL at the code and database layer, improving service response times by 20-30%. - Collaborated with Developers to integrate translation lookup functionality into the Codeweavers platform, enabling a key client to break into 4 major EU markets whilst generating opportunities to expand client outreach into 22 more inside and outside the EU.	

- Aided in upgrade and repositioning of an **event-based** legacy data import system responsible for processing 62,000+ vehicle records daily, improving overall platform health by bringing it into the same domain as other systems and eliminating redundant data sources.

Game Tester

Jun. 2018 - Feb. 2019

Huntress Search Ltd / HCL Technologies

Reading, Berkshire

- Operated as a zero-hour contractor for a key unnamed client in the Games Industry.
- Performed manual compliance testing on upcoming titles as part of a 10-person team.
- Documented unexpected issues with reproduction steps for development teams.

CERTIFICATIONS

AZ - 900: Microsoft Azure Fundamentals

Oct. 2022

Credential ID 84505F8DCF8A6F35

Microsoft Corporation

PROJECTS

Acai | github.com/not-ed/acai

Jun. 2024 - Present

C#, .NET, SQLite, NUnit, Moq, GitHub Actions, .NET MAUI

- Built a food journalling and health tracking application for Android devices.
- Utilized SQLite to create an offline-first "backend" that persists data locally on User devices.
- Core business logic is maintained as a standalone C# Class Library using SOLID and TDD principles, enabling the creation of forks/clients for alternative platforms.
- Established a complete deployment pipeline using an Ubuntu GitHub Actions Runner, allowing builds to be signed, packaged and released in under 5 minutes.

Fresnel | fresnel.not-ed.com

Sep. 2023 - May 2024

C++, WebAssembly (Emscripten), JavaScript, Microsoft Azure

- Proof-of-concept web dashboard for producing real-time mood lighting effects on consumer RGB smart light bulbs, built as a dissertation project at Staffordshire University.
- Extracts dominant colours from user-uploaded media using a WebAssembly Module compiled from C++ source code.
- Utilizes Web / Browser APIs to facilitate rapid delivery of advanced functionality in-browser.
- Migrated to static hosting in Microsoft Azure using Storage Containers and Azure CDN in 2025.

DOOMify | github.com/not-ed/doomify

Jul. 2020 - Sep. 2023

C++, Python, Pillow / PIL, Qt, CMake, Windows, Ubuntu

- Prototyped a colour quantization utility in Python for creating retro game textures from real-life images, which was later re-developed as a GUI application for Windows and Linux using C++, Qt, and CMake.
- Reconstructs source images using the closest approximate colours from a fixed palette, reproducing a "digitization" effect seen in early video games of the 90s.
- Consolidated existing libraries and self-written parsers to introduce support for user-defined colour palettes in several recognised file formats, such as *.json* and *.gpl*.

Ahri | github.com/not-ed/ahri

Jun. 2021 - Jul. 2021

Python, Requests (Python), Raspberry Pi OS

- Web-scraping bot written in Python which automatically shares *League of Legends* Patch Notes to Discord using Webhooks.
- Provides settings for custom messages and role mentions when posting via local configuration files.
- Deployed to Raspberry Pi OS as a systemd daemon to allow headless and unsupervised operation.

TECHNOLOGIES

Languages: C#, .NET, Python, JavaScript, HTML, CSS, C++, WebAssembly (Emscripten)

Databases: PostgreSQL, SQLite, SQL Server

Libraries: NUnit, Moq, NHibernate, React, Requests (Python), Pillow / PIL, SDL2

Developer Tools: Git, GitHub Actions, Insomnia, Bash, TortoiseSVN

Operating Systems / Platforms: Microsoft Azure, Windows, Ubuntu, Raspberry Pi OS
